Search plan: Oct 19 to Nov 17, 2026

Owner: Priyanshu Singh, Head of Search. Divij: factual review of what is published. Measured on Nov 17 with the same 28-day method as the baseline.

Lagging metric: qualified search + AI leads. The quarter goal stays 25 to 30 a month by Jan 5. No separate number for this month; reported every week. Baseline: 7 leads in 28 days.

Leading metrics

Metric	Baseline (Sep 15 to Oct 12)	Target by Nov 17
US clicks, 28 days	167	250 (+50%)
US average position	30.9	20
Non-branded impressions, 28 days	51,578	67,000 (+30%)
Pillar listicles, US position	SaaS website 76.9, product design 39.7, UX design 77.5	Top 10
Good backlinks to one pillar listicle	0	5

The trend should be back up by Nov 17. The Dec 2025 peak is not the benchmark, because about 2,100 library and location pages were noindexed on purpose.

Inputs by Nov 17

- 3 pillar listicles: SaaS website design agencies, best product design agencies, best UX design agencies
- 12 agency review articles, manually researched (not templated)
- 6 agency alternatives articles
- 21 pages published or rewritten in total, one a day
- Backlink outreach: 10 prospects a day on LinkedIn and email (about 220), across at least 100 sites

Weekly targets (read every Friday)

Week	Pages published or rewritten	Backlink prospects	US clicks	US position	Pillars (US)	Backlinks
Week 1, Oct 19–23	2 pillars, 2 agency reviews, 1 alternatives	50	170	30	Indexed	0
Week 2, Oct 26–30	Pillar 3, 3 reviews, 1 alternatives	50	185	28	Top 50	0
Week 3, Nov 2–6	3 reviews, 2 alternatives	50	205	25	Top 30	1–2
Week 4, Nov 9–13	3 reviews, 2 alternatives	50	230	22	Top 20	3–4
Close, Nov 16–17	1 review	20	250	20	Top 10	5

Daily inputs

- **Every day:** publish or rewrite one page, contact 10 backlink prospects on LinkedIn and email (plus follow-ups), check yesterday's Search Console movement, log what shipped
- **Mon to Wed:** publishing comes first, so new pages are indexed and collecting data by Friday
- **Thu:** rewrite, or research the next week's pages (Clutch, site, pricing, case studies, founder posts)
- **Fri:** finish the next page, add internal links to the week's new pages, send the weekly report

Why the first pillar took longer

A lot of the data had to be collected by hand (Clutch blocks scripts, LinkedIn needs a login), every figure was checked against Clutch, the agency's site and the report, and the page went through several review rounds. It also set up the system that will be reused, so the next pillars should take about half the time.

What can influence the metrics

- Google updates: a core update in this window can move rankings either way; the domain is still recovering from the May 2026 core update
- Indexing speed: new pages have to be crawled and indexed before they rank, so slow indexing delays the weekly numbers
- New pages start low: average position can look worse at first, so it is read alongside the pillar positions
- AI Overviews: they sit on most money keywords and lower clicks even at top positions
- Backlink pace: how fast the 5 links go live depends on how quickly prospects reply and publish
- Domain pricing: higher prices on strong, relevant domains can push the backlink budget up
